DIRECTIONS FOR PLANTING FRUIT TREES

Trees should be planted immediately after arrival, if possible. After opening package, keep roots covered with damp cloth—never expose to sun and air. 1. Notice cut opposite.

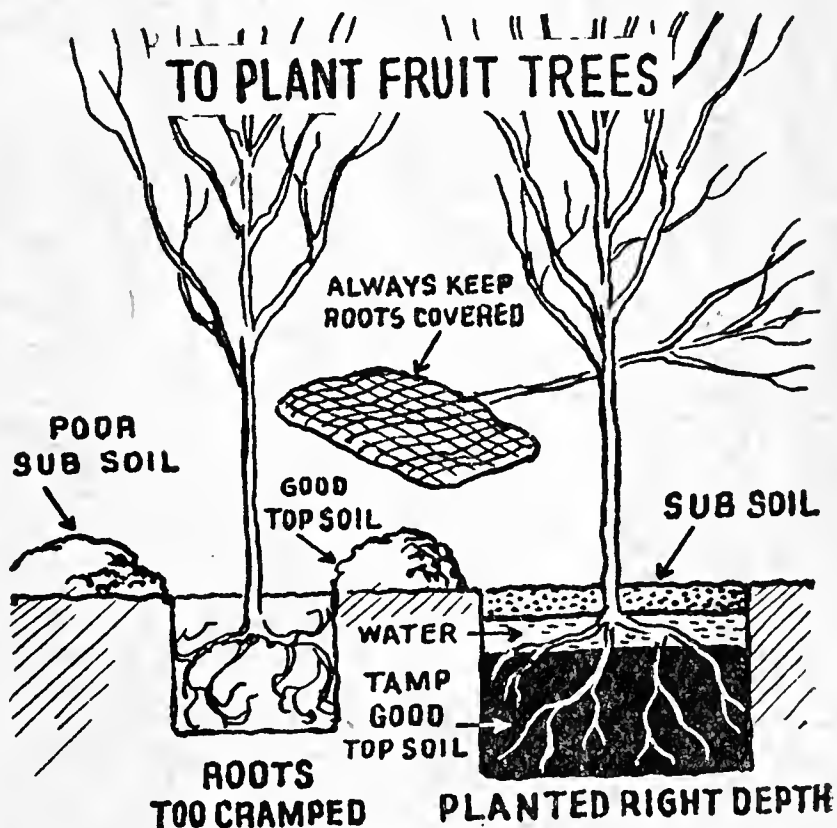

2. Dig hole large enough so that roots will not be crowded. Make separate pile of fertile top soil—the first six or eight inches first removed from hole.

3. Tree must be planted two inches deeper than grown in the nursery, or two inches deeper than old soil mark on tree.

4. Put fertile top soil around roots, breaking up so that there are no air pockets. Fill hole about two-thirds full, pressing earth down firmly. Water well. Fill hole to top.

DIRECTIONS FOR PLANTING TREES

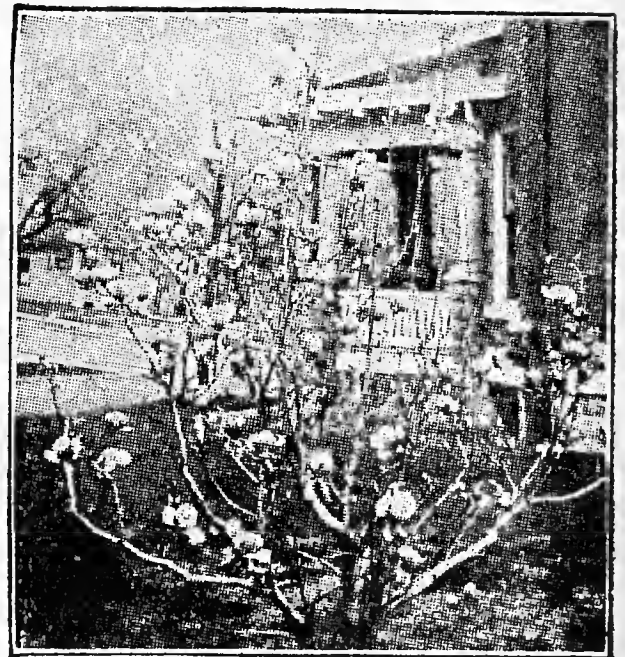

If possible, plant trees immediately on arrival. In any case keep roots moist. Do not expose to sun and air. 1. Dig hole large enough so that roots will not be crowded, plant 2 inches deeper than soil marks at base of tree. 2. Fill hole half full of rich top soil, firm well and fill hole with water. When water has drained away, fill remainder of hole with balance of dirt. 3. Prune top well back as this helps tree to grow. About once a week water until soil is completely saturated. Wrap trunk with burlap or paper to prevent sun scalding and borers. If tree is large and shaken by wind, stake tree. See illustration page 7.

SPRINGHILL'S QUALITY GRASS SEED

A BEAUTIFUL LAWN ADDS TO THE CHARM OF YOUR HOME

It pays to buy the best for results. Sow seed from early spring to late May when the ground is moist. A well prepared seed bed is essential, so work your soil thoroughly six to eight inches deep. Add humus to heavy soils. Good seed is important and economical. Sow 1 pound of seed to 200 square feet of lawn; if soil is dry after sowing be sure to sprinkle. Mow soon as tall enough, as mowing makes the plants stool out. If soil is not the best, fertilize with turf builder and reseed any bare spots. Springhill's seed formulas are dependable and reliable. They are the results of many years research and are blended from the World's most choice grasses.

INTRODUCING SPRINGHILL'S NEW GRASS SEED FORMULA

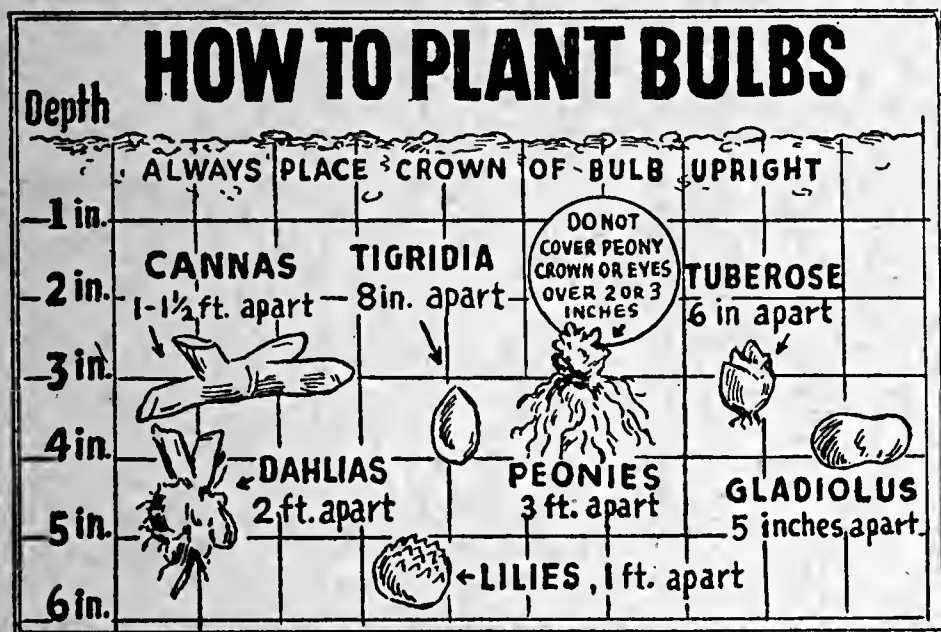

(Gridiron Mixture)—All sorts of combinations and formulas were used in all sections of the Middle West to finally arrive at this superb mixture. We guarantee to give the utmost satisfaction. There are cheaper grass seeds but none better. Only choice seeds make up Gridiron Mixture. 50c per lb.; 5 lbs. for \$2.25; 25 lbs. for \$9.95.

EVERGREEN LAWN MIXTURE Composed of choice perennial grasses blended so they will grow quickly and make a sturdy sod in six weeks. We can recommend this mixture for those who want a sun and wear-resisting turf. Used extensively by parks and cemeteries, so it must be good. 38c per lb.; 5 lbs. for \$1.75; 100 lbs. for \$32.00.

KENTUCKY BLUE GRASS Most dependable and cosmopolitan grass; growing well in most all locations and soils. Our blue grass seed is top quality, almost 100% free of weed seeds and high germinating fresh crop seed. It pays to buy high grade seed for results. 1 lb. 30c; 5 lbs. \$1.25; 100 lbs. \$22.50.

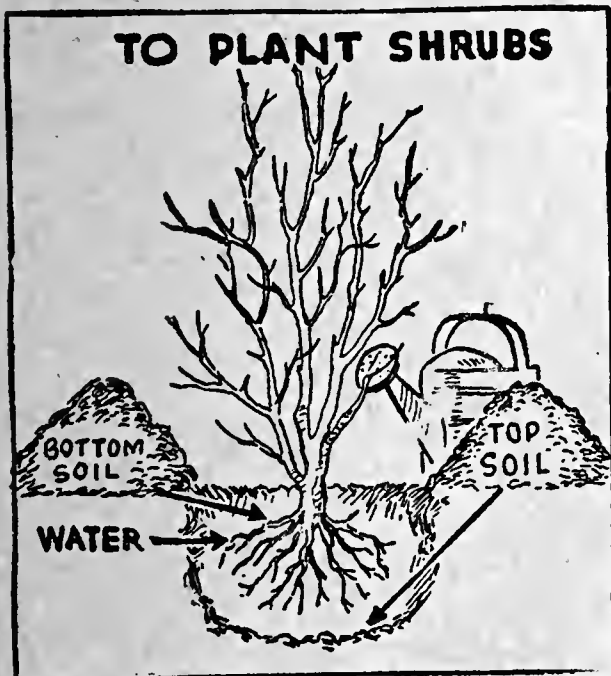

WHITE CLOVER Extra Fancy Seed—A lawn can be quickly established by sowing this extra fancy grade of seed. It is very good to use in renovating old lawns. ½ lb. 40c; 1 lb. 70c; 5 lbs. \$3.35; 10 lbs. \$6.50.

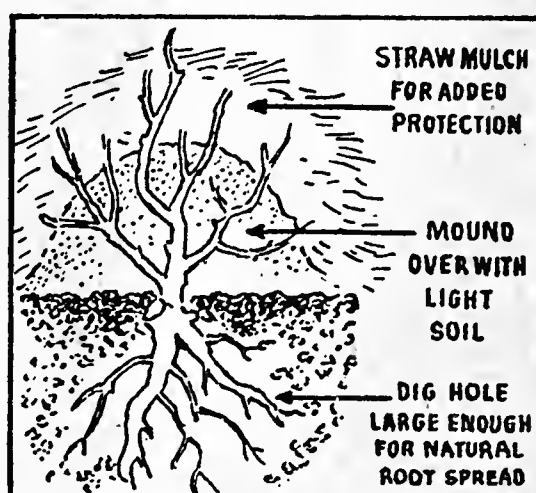

The diagrams show the proper depths and method of planting shrubs, flowers, roses, and bulbs. Rules for successful planting: 1. Dig hole larger than root system. Fill loose, fertile top soil around the roots. The loose fertile top soil is more nutritious and enables the new, tender roots to grow. 2. Fill hole about two-thirds full, firm or pack soil, then water until completely saturated. Fill remainder of hole with dry soil.

WE ARE GLAD TO ASSIST YOU IN YOUR GARDENING AND PLANTING PROBLEMS.

DIRECTIONS FOR PLANTING AND GROWING ROSES

Follow simple directions in picture and you will succeed with our hardy roses and enjoy an abundance of bloom. A well drained soil is essential. With heavy soils adequate drainage should be provided. Plant below the bud or where the branches start. This is usually about 2 inches deeper than they grow in the nursery row. After planting, mound up about 6 inches high around top of plant. Cut off top of rose bushes 1 or 2 inches above top of mound. Do not remove mound for at least ten days. Plant roses in beds 18 to 24 inches apart. Water well when planting. Fertilize with manure or any good commercial fertilizer about two weeks after roses have been planted.

PLANTING FLOWER SEEDS

Plant or cover seed 3 times diameter of seed. If seed is 1/8 inch in diameter, plant 3/8 inches deep. Fine seed, sow or broadcast on top of ground, rake soil lightly after sowing. Keep continuously moist until seed germinates. Best to cover seeds with a light mulch of straw, leaves, or burlap to keep hot sun from drying out the seed. Remove mulch or burlap soon as seed germinates. Dig and rake soil thoroughly before seeding.

NEW BOYSENBERRY

King of the Berries. Excels all others as to size, color, productiveness and quality; easily raised. Hardier than Youngberries. Plant 6 ft. by 6 ft. and trellis. DO YOU HAVE TROUBLE GROWING PLANTS?

For Home Gardeners—Please Read Carefully!

Have YOU ever had "bad luck" with some particular tree or flower which you were anxious to raise? Hundreds of home gardeners have and have placed the blame everywhere except where it belongs—unsuitable soil conditions.

Plants like humans, need food to live and grow and this food is largely furnished by the soil in which they are planted. If the proper food is not there in sufficient quantity, you either have spindly plants or no plants at all. For example, it is useless to try to grow Gardenias in sub-acid soil but in slightly acid soil, they thrive.

Soils seem much alike to us humans but not to growing plants and in order to get the plant's view,

soil should be analyzed. This will tell you what and how to plant for best results.

For only \$3.00, we will make a **SCIENTIFIC LABORATORY TEST** of your soil and our experts will give you full advice as to planting any three of the following: Fruit Trees, Bulbs, Lawns, Evergreens, Perennials, Roses, Glads, Dahlias, Shrubs, Vines, or Shade Trees. Here's all you have to do. Send us \$3.00 with a pint sample of soil in secure package marked with your name and address. Select the soil from several places and from several depths, top soil and six and twelve inches deep. Also let us know on what three types of plants you wish advice. We will do the rest. Should you want information on more than three plants, add 50c per plant.
